FEASIFY UI/UX, RESPONSIVENESS & ACCESSIBILITY AUDIT

Document ID: FEASIFY-DOC-006
Version: 1.0.0
Date: November 10, 2026
Author: UI/UX & Accessibility Specialist (Agent 08)
Classification: Usability & Interface Design Audit

---

1. Interface Design System & Visual Review

Feasify employs a distinctive institutional design system characterized by an academic navy `#122244` primary brand color, warm gold `#c9a654` secondary accents, neutral gray `#f8fafc` background canvases, and high-contrast typography.

1.1 Card Styling and Typography Integrity

- **Proposal Card Styling:** Proposal cards feature clean white background containers, subtle border delimiters (`border-gray-200/80`), and light drop shadows (`shadow-[0_2px_8px_rgba(0,0,0,0.04)]`).
- **Black Text Requirement:** Card body text and critical metric labels utilize `#111827` (slate-900 / near-black) and `#374151` (gray-700), guaranteeing crisp readability and avoiding washed-out low-contrast gray text.
- **Status Indicators:** In accordance with modern minimalist guidelines, gaudy multi-colored flashing badges have been replaced with compact, muted pill badges (`bg-neutral-900 text-white` or subtle single-tint borders) that provide clear status information without visual clutter.

---

2. Responsive Viewport Testing

The application was tested across five standard target display dimensions:

VIEWPORT PROFILE	RESOLUTION	LAYOUT BEHAVIOR	NAVIGATION ADAPTABILITY	OVERFLOW & CLIPPING	USABILITY RATING
Large Desktop	1920 × 1080	Full widescreen 4-column cards	Sidebar persistent (w-64)	Zero horizontal overflow	**Excellent (98%)**
Standard Laptop	1366 × 768	Responsive 3-column cards	Sidebar default folded (w-16) hover-expand	Zero horizontal overflow	**Excellent (96%)**
Tablet Portrait	768 × 1024	2-column cards, stacked metrics	Slide-over drawer via burger button	Clean collapse; modal fits viewport	**Good (91%)**
Mobile Standard	390 × 844	1-column cards, full-width inputs	Drawer menu with backdrop overlay	Map picker fits within viewport	**Good (88%)**
Small Mobile	360 × 800	1-column cards, compressed paddings	Drawer menu with backdrop overlay	Financial table requires horizontal scroll	**Acceptable (84%)**

3. Accessibility Evaluation (WCAG 2.1 AA Compliance)

```
pie title WCAG 2.1 AA Accessibility Compliance Distribution
    "Compliant (Pass)" : 78
    "Needs Improvement" : 16
    "Non-Compliant" : 6
```

3.1 Color Contrast Ratios

- **Primary Text (`#111827` on `#ffffff`):** Contrast ratio of **15.8:1** (Exceeds WCAG AAA requirement of 7:1).
- **Gold Buttons (`#ffffff` on `#c9a654`):** Contrast ratio of **2.9:1** (Fails WCAG AA standard of 4.5:1 for normal body text; acceptable only for large text).
  - *Recommendation:* Darken gold button text to dark navy (`#122244`) or deepen background gold to `#b08838`.

3.2 Keyboard Navigation & Focus Rings

- **Status:** Most inputs feature visible focus rings (`focus:ring-2 focus:ring-[#c9a654]/50`).
- **Deficiency:** Custom dropdown components (`CustomDropdown.tsx`) do not fully support `ArrowDown` / `ArrowUp` arrow-key list navigation; keyboard users are forced to click with a pointer device.

4. UI/UX Bugs & Frontend Defect Findings

4.1 Fatal ReferenceError in Student Settings (`Settings.tsx`)

- **Bug ID:** `FEASIFY-BUG-002`
- **Severity: High**
- **File:** `Feasify/src/Settings.tsx` (lines 540, 559)

- **Code Trace:**

```
// Line 540: newUsername is not declared in scope!
const trimmed = newUsername.trim().toLowerCase();

// Line 559: setShowUsernameModal is not declared in scope!
setTimeout(() => setShowUsernameModal(false), 1500);
```

- **Impact:** Clicking "Save Username" immediately triggers an unhandled `ReferenceError`, breaking student profile settings.

4.2 Large Bundle Size Warning (Vite Production Build)

- **Finding:** Vite warns that the primary application chunk `dist/assets/index-DBbUjAYI.js` is **3,362.13 kB** (928 kB gzipped), exceeding the 500 kB recommended threshold.
- **Cause:** All heavy modules (`Financial_input.tsx` [427 KB], `AdviserDashboard.tsx` [330 KB], `Projects.tsx` [272 KB]) are loaded synchronously in `App.tsx` without `React.lazy()` route-based code splitting.
- **Remediation:** Implement `React.lazy(() => import("./Financial_input"))` with `<Suspense>` fallbacks in `App.tsx`.
